Weight and Size Limits for Packages

DIM Factor = 194

Dimensional (DIM) Weight or Actual Weight will be applied, whichever is greater.

DIM Weight = L" x W" x H" divided by 194

WPX has established specific weight and size limits for the packages that you send with all WPX services. The following restrictions only pertain to individual packages:

- * Packages can be up to 150 lbs
- * Packages can be up to 120 inches in length and girth combined
- * Packages can be up to 60 inches in length- the maximum dimension being 60 inches, the length and girth combined can not exceed 120 inches.
- * Packages with large size-to-weight ratios require special pricing and dimensional weight calculations:
 $L \times W \times H / 194$ (factor), = dimensional weight versus actual weight, the higher weight applies.
