ENHANCED TECHNOLOGY MAKES SHIPPING WITH WPX EVEN BETTER

Auburn, WA – December 2007

WPX partnered with AT&T Wireless this year to deploy Microsoft Windows Mobile devices to our delivery fleet. This move enables WPX to capture real time data from the delivery drivers back through the chain to our customers, facilitating the ability to capture signatures of the recipients. This data then becomes accessible by WPX Customer Service Staff as well as the customers, directly through our web interface in a matter of seconds. Every time a parcel is updated using one of the Window Mobile devices, it updates the status on our systems for quick visibility.

WPX is proud of this recent development and continually looks for ways to enhance our technology and operations to better the shipping experience for our customers.
